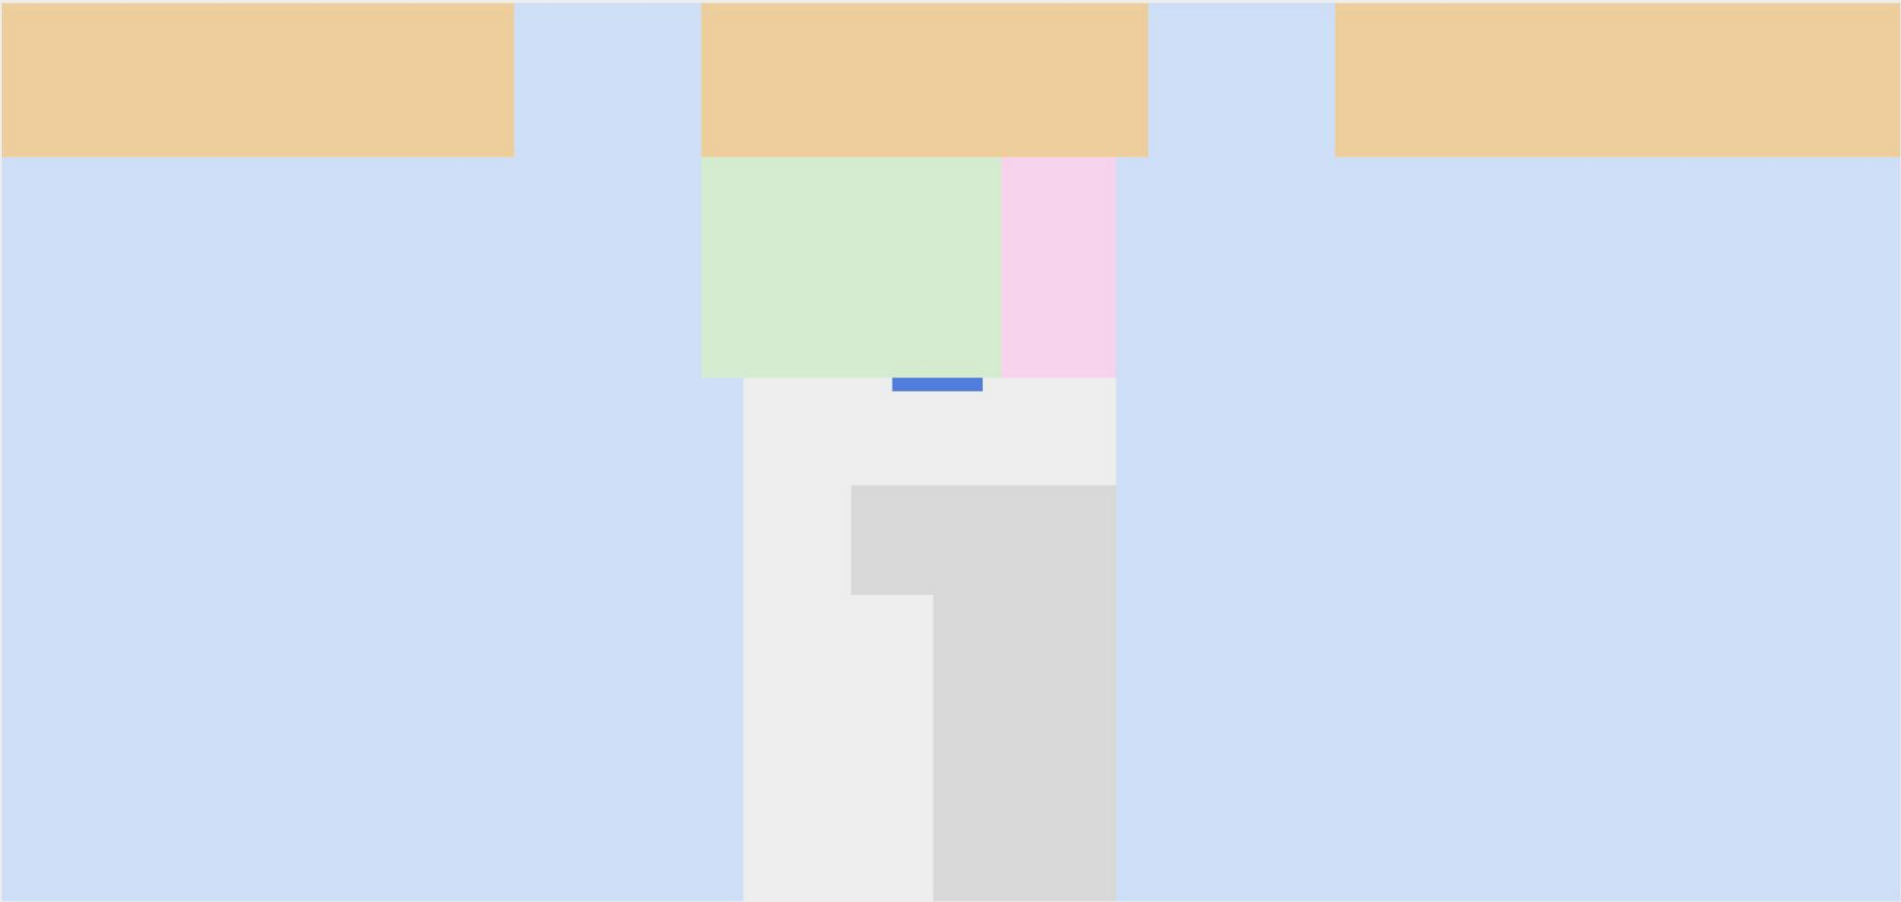
Current 2nd Story Layout

This first image is of the entire upstairs of our cape cod home. The bedrooms are in blue and their attached closets are in pink. The green space is currently an unfurnished alcove. The light gray is the walkway, and the dark gray is the staircase. The new bathroom will go in the green space and closet on of the bathroom on the left side of the second story of the home. The red space is the the only existing hvac duct in the upstairs. The orange space is attic space on the front of the cape cod, under the eaves of the home.

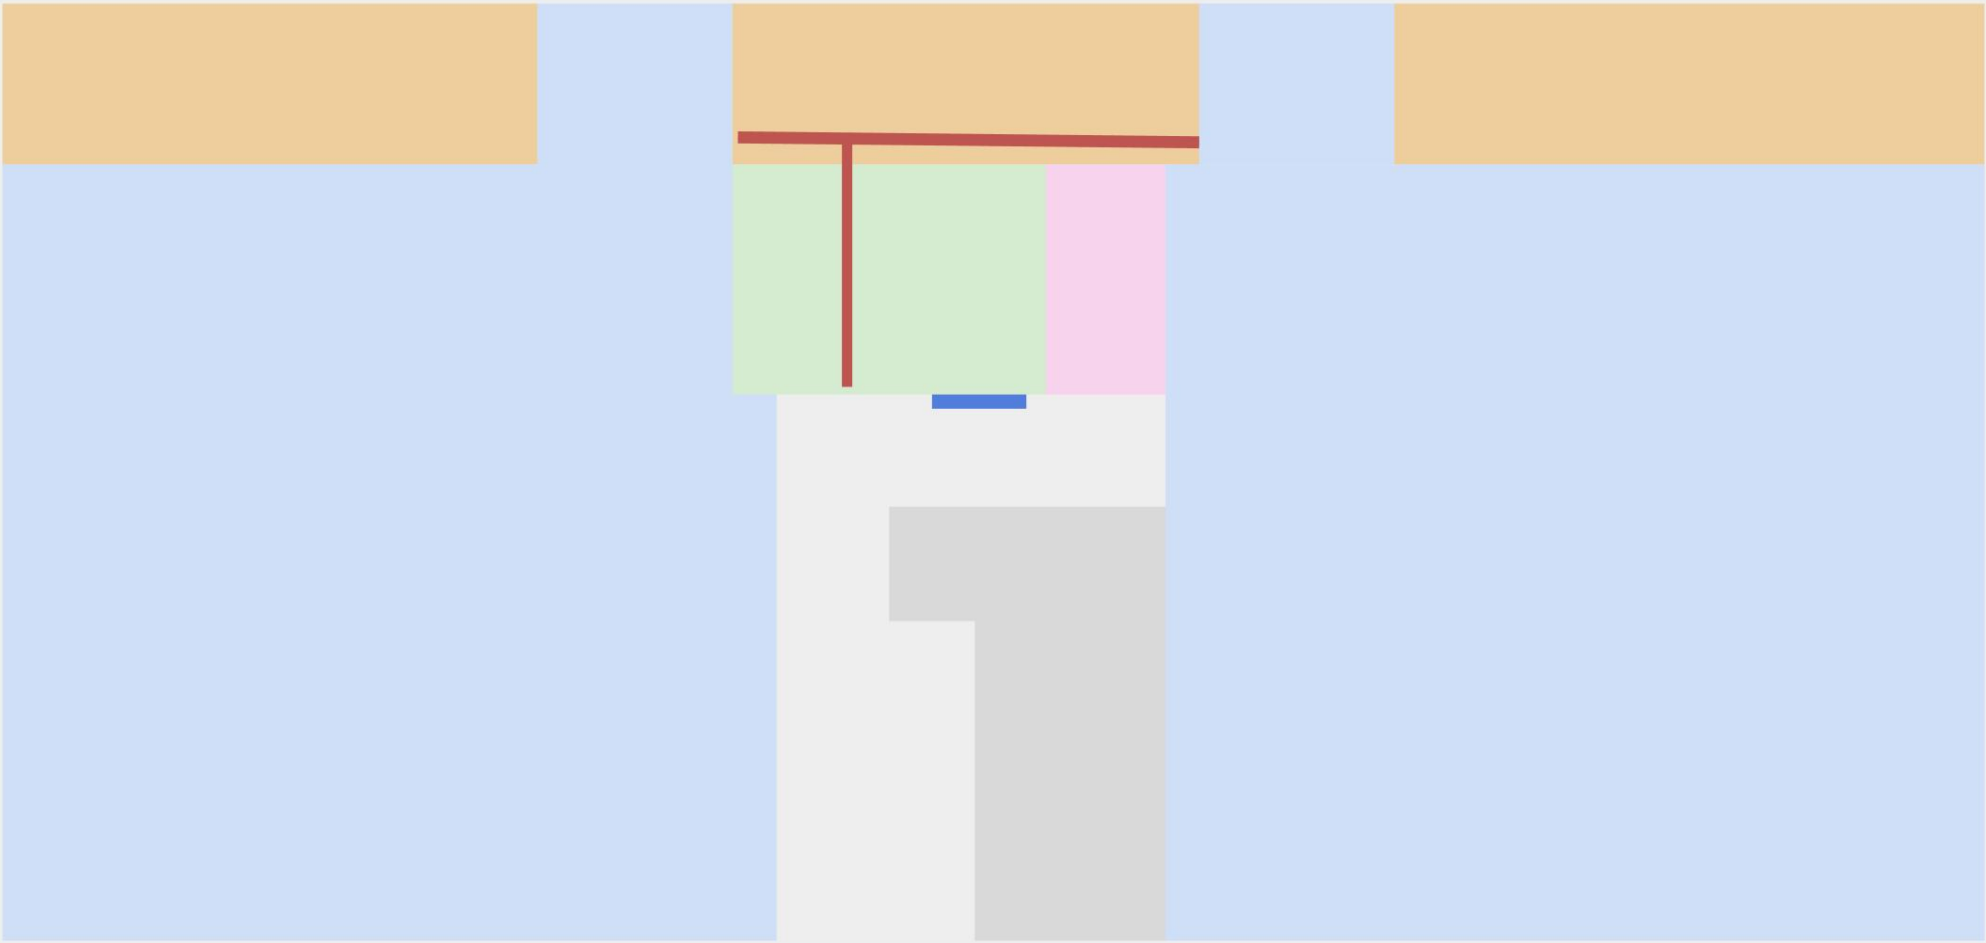
Bathroom Construction (Overview)

The bathroom will be constructed by demolishing the wall in between the closet and the alcove space and enclosing the alcove space with a door to the bathroom.



Bathroom Layout + Electrical

The bathrrom will feature a toilet (yellow) a sink (blue) and a stand up shower (red).
The shower is a 36×36 stand up shower. Next to the shower (pink) will be shelfing/bathroom storage.
Right next to the sink/vanity, we will put in an electrical box to provide power for the bathroom (orange) and we will also put in a vent/light in the center of the non-shower space of the bathrrom (grey).

HVAC Re-route (Overview)


In order to get heat into the bedrooms, we will be adding 6 inch insulated duckwork between the 8 inch trusses into the attic space and into each of the rooms and into the new bathroom. This will be a significant improvement to the home as the bedrooms currently lack heat when their doors are closed.
